

Carbon rotor blades

Description

Aerodynamically optimized carbon rotor blades guarantee you extreme stability with maximum vibration resistance. Handmade in German workmanship

Our rotor blades are made of the material of the future:

Carbon is known for its high stability and extremely light weight.

In addition, carbon is corrosion-free, a material property that is essential in terms of safety.

Data check:

- Rotor blade material: carbon fiber reinforced fiber (CFRP), precision laminated
- Number of blades: 3
- Rotor diameter: 1.5 meters
- Blade weight: 250 grams
